Keygen. 2.Enable your Windows Firewall to allow the program to connect to the Internet. 3.Run Autodesk Autocad 2012 Keygen as administrator. 4.Click to the link and download the Autocad 2012 Keygen. 5.This file is written for Windows XP/Vista/7/8 and MAC. When you get this file, install it with a double click and follow the instructions.Q: How to read column names of a SQL database table in C# I have table in SQL Database with ten columns in C#. I want to read these columns' names without displaying the column values. A: If you use a SQL command, it will be generated by the server and therefore cannot be compiled by the.NET provider. If you are using SQL Server Management Studio, then use the Object Explorer, right-click your table and choose "View Designer". The table schema will appear on the left. Declare a DataSet for your database, then call Select() on your DataAdapter to generate the SQL you want, then call Execute() on your DataAdapter. DataSet ds = new DataSet(); DataAdapter da = new SqlDataAdapter("SELECT \* FROM table\_name", connectionString); da.Fill(ds); int count =

---

ds.Tables["table\_name"].Rows.Count; You can then iterate over the DataTable like this: foreach (DataRow row in ds.Tables["table\_name"].Rows) { //Do something with the row's column names, e.g. Console.WriteLine(row["column\_name"]); }

Q: How to change focus from View to another Is it possible to change focus from view to another view within the same activity? If I have one xml file with tabbed layout and each tab has one xml layout file, is it possible to change the focus in the onTabSelected of each tab? I have tried the following:

tabHost.getTabWidget().getChildAt(0).getChildAt(0).setFocusable(false); but I am not sure that it will work, the result of that is: I/Tabber.search(5998): onTabSelected 82157476af
